Submitted (16-MAY-2000) Department of Medicine and Genetics, University of Washington Genome Center, University of Washington, 3 (bases 1 to 25022)

Pseudomonas aeruginosa Community Annotation Project (PseudoCAP) Direct Submission Submitted (04-FEB-2003) Department of Molecular Biology and Biochemistry, Simon Fraser University, 8888 University Dr., Burnaby, British Columbia VSA 1S6, Canada

This represents the February 3, 2003 version of the continually updated, reviewed, Pseudomas aeruginosa PAO1 genome annotation, from PseudoCAP (see http://www.pseudomonas.com for latest updates and links to alternate annotations). PseudoCAP is coordinated by Fond S.L. Brinkman (Simon Fraser University, Canada) and Robert E.W. Hancock (University of British Columbia. Canada). We welcome submission through www.pseudomonas.com of any proposed changes.

of the protein name. Function experimentally demonstrated in P. aeruginosa. Function of highly similar gene experimentally confidence, is used to rate our confidence of the Protein name accuracy c Class 1: F Class 2: F

demonstrated in another organism (and gene context consistent in terms of pathways its involved in, if known).

3: Function proposed based on presence of conserved amino acid motif, structural feature or limited sequence similarity to an experimentally studied gene.

4: Homologs of previously reported genes of unknown function, or no similarity to any previously reported sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /Jocus tag="PA1070"
